EXPERIENCE

LinkUp

Web Developer Intern

Minneapolis, MN

Feb 2023 – Current

- Optimized **web scraping** techniques using **PHP** on sites to extract data relating to current job posting information.
- Collaborated with **3 interns** to implement different scrapers and **efficiently extract** web data using scraping methods.
- Engaged with senior developers to resolve problems and streamline efficiency in the scraping process.

Ausco Design

Graphic Designer

St. Michael, MN

Aug 2020 - Dec 2022

- Designed and created custom product mock-ups, promotional materials, and **custom sales materials** for clients to sell their products, using mainly the Adobe Suite.
- **Updated and refined** existing branding materials for clients to better portray their modern business needs.
- Collaborated with clients to execute their vision from **concept to completion**.

UPS

Graphic Designer

St. Louis Park, MN

Feb 2019 - Aug 2020

- Created **custom promotional products** to better promote UPS stores and their various in house services to customers.
- **Maintained and developed** branding for several local small businesses and successfully helped to elevate their brand identities.
- Reached a new customer base through the use of **strategic marketing** and helped increase graphic design service sales by **30%**.

EDUCATION

St. Cloud State University

Bachelor of Arts in Graphic Design

Saint Cloud, MN

Aug 2021 – Current

Minneapolis Community and Technical College

Associate of Arts in Graphic Design

Minneapolis, MN

Aug 2019 – Apr 2021

PROJECTS

Newsy | React.js, Node.js, Express, winkNLP, Google Maps API, News API

- Identifies and plots current news articles using the **Google Geocoding API** and **Google Maps API**.
- Utilized **named entry recognition** to identify locations mentioned in news article headlines so that their longitude and latitude can then be found and then plotted.
- Designed a Node backend to facilitate requests **50%** faster and perform **NER** using the **winkNLP** JavaScript library.
- Created custom **Google Map Markers** and info windows that are displayed on every search and when hovered respectively.

JobsSpot | JavaScript, React.js, Bootstrap, JSearch API, Sass, Material UI

- Searches and displays aggregated job postings provided by the J Search API in a **modern responsive UI** using **React.js**.
- **Identifies** and **labels** new results based on the date on which they were originally posted, job salaries, job locations, and more.
- Designed **custom search parameters** to allow users to search for positions by job description, location, or both depending on their individual needs.
